RAMP
Regenerative Agriculture Mentoring Program

11. Tools for Resilience

"Resilience is the capacity of a system, enterprise, or person to maintain its core purpose and integrity in the face of dramatically changed circumstances"

Pre-session Question:

Think about the tools you use to manage your land. What tools do you use, what do you wish you had, and what would the benefits be?

Andrew Zolli
Technologist & Author

This project has been assisted by the NSW Government through its Environmental Trust

Tools for Change

Technology

From draught animals to the latest tractors, technology is advancing the way we farm.

Fire

Fire has been used to alter ecosystems by removing fuel loads through controlled and patch burning by Indigenous Australians for millennia

Tools for Change

Living Organisms

Increased complexity improves landscape health, and is one of the most important tools we have to increase resilience on the farm

Grazing and Animal Impact

Animals can be used through active and adaptive grazing management and as a tool for their impact on the land and ability to improve landscape function

Questions/Activity/Reflection

- What extra tools do you have available to manage your land that you didn't consider before the session?
- How will they help you farm?

This project has been assisted by the NSW Government through its Environmental Trust
